

Maintain greater control of your supply chain

Healthcare Materials Management (HMM) delivers a superior and comprehensive Microsoft Dynamics ERP solution to simplify and enhance your complex supply chain management. Materials management is a process filled with redundancies and inefficiencies, and is the second most costly element of providing healthcare services.

Imagine having a software solution that can scale as you grow, maintain control of your complex procurement and fulfilment processes, cut down on materials costs, and provide strong business intelligence. HMM delivers significant productivity gains, inventory visibility, traceability and control at a much lower total cost of ownership. For healthcare organizations operating multiple entities, HMM is also fully integrated with Multi-Entity Management (MEM), providing the ability to manage multiple entities in a single database and centralize processes.

Optimize your company's performance

Efficiently move supplies and equipment throughout the Healthcare Supply Chain

Reduce incidences and costs associated with rush deliveries and emergency

Control PAR levels by inventory site

Reduce inventory levels and associated inventory turns

Control stock/non-stock item inventories

Receive items from many POs in one receipt screen
